SCOPE OF WORK

1. INTRODUCTION

Train crew working trains from origin to destination require hygienic sanitary equipment to use en-route their trips. There are different types of toilet systems on board locomotives which train crew can use and that needs to always be cleaned and maintained.

The purpose of this document is to clarify the cleaning processes of the locomotive toilets to ensure that hygienically clean facilities are available to our train crew at all times.

2. Scope of Specification

This specification covers:

The requirements for the cleaning of the toilet and its cubicle, emptying the retention tank and refilling water into the tank.

Both chemical toilets and systems that incorporate a septic tank that are used on locomotives.

The cleaning and disposal of waste from locomotive porta potties.

3. Chemical Toilets System "Porta Potties"

There is continuous recycling of water, waste and chemicals therefore regular drainage and refilling is frequently required depending on the system capacity.

There must be a pool of Porta Potties available for the toilet cleaning team so that change out can take place on an exchange basis.

The Porta Potties can preferably be placed on the leading and the last loco.

4. Cleaning a Chemical Toilet System "Porta Pottie"

The cleaning operation should be performed in a demarcated area, at the service provider's site, with access to a sewage drain or a normal toilet and tap for water.

The toilet cleaning team unlocks the toilet using the unique keys.

Disconnect flush tank from the waste tank.

Empty waste tank into a sewage drain/toilet through the emptying spout. To ensure proper decanting swing the emptying spout outwards as per *figure 1.1 (refer to Annexure A)*. When emptying, spout should

be pointing downwards, depressed depress vent button to avoid splashing while waste is being disposed of.

The cleaning operation should be performed using soapy water and anti-bacterial cleaners.

The waste-holding tank must be filled with Aqua Blue and water

The flush-water tank must be filled with Rinse Blue and water

While the toilet is being removed, the toilet cubicle should be cleaned with a mop. Each cubicle has a waste drain through which excess water can drain out of the cubicle.

The water tank should be re-filled with clean water at all times.

5. Logistics Requirements

The toilet has sufficient capacity to last up to 5 days of use; hence the cleaning process has to be performed on return (during trip inspection).

The toilet can easily be ferried by bakkie / Kombi should there be any incident. It can be moved through locomotive doors with ease. (See figure 1.2, Annexure A)

Septic Tank Types System Toilet

The cleaning operation should be performed in the toilet inside the locomotive. (See figure 1.3)

The toilet cleaning team cleans the bowl walls inside-out using a brush.

The cleaning operation should be performed using soapy water and anti bacterial cleaners.

The toilet cubicle should be cleaned with a mop. Each cubicle has a waste drain through which excess water can drain out of the cubicle.

The toilet cleaning team should gauge the water level in the locomotive tank and refill. The tank can take up to 100 litres and a single flush uses approximately 2 litres therefore the water can last up to 50 flushes.

6. QUALITY ASSURANCE

Transnet Freight Rail shall nominate a quality Inspector according to different regions / depots who will take samples daily of cleaned locos and evaluate the quality.

Transnet Freight Rail and the supplier shall agree on quality deliverables that needs to be incorporated in the evaluation form.

Manuals can be provided by Transnet Freight Rail to the supplier if needed.
