10 SPECIFICATION/SCOPE OF WORK

Technical Specifications

Configuration and integration of existing alarm intrusion and fencing systems to the Nerve Centre, hand-over and guarantee of the system as specified, complete in every respect.

- 1 **INTRUSION ALARM SYSTEMS (IAS) / PIR Intrusion Detector with Small Pet Immunity**
 - 1.1 Each detector shall provide the detection, signal processing, alarm relay, and operating power circuitry in the same enclosure, and shall provide an alarm relay output upon detection of an intruder moving into or through its protection pattern. The enclosure shall be ready for surface and/or corner mounting, and shall be capable of mounting to compatible wall or ceiling mounting bracket without modification.
 - 1.2 Each detector shall feature a single piece electronics board whose circuitry is specifically designed for this detector alone. The board shall be mounted to housing with the cover being secured with a screw. The case shall include easy wiring knockouts and a wiring guide with wide wiring space.
- 2 **LED Operation**
 - 2.1 The detectors shall incorporate a single, red LED to indicate the operating conditions. Red LED illuminated shall indicate an alarm condition. Red LED not illuminated shall indicate a non-alarm condition. LED shall be able to be fielding disabled using ON/OFF pin switch.
- 3 **Power Requirement**
 - 3.1 The detector shall be capable of operating from a DC Power source rated with the range of 9.5 to 16 Volts DC and shall draw a nominal 17 millie-amperes (mA) 12 VDC.
- 4 **Alarm Operation**
 - 4.1 A condition alarm shall occur when the PIR alarm conditions are met. The sensitivity shall be 2.0 at 0.6m/sec. the Detection Speed shall be 0.3-1.5m/sec. the Alarm Period shall be approximately 2.5 seconds. The Alarm Output shall be capable of handling 28VDC, 0.2A max, N.C. The pulse count shall be approximately 20sec, and shall allow for a selection mode of 2 or 4 triggers to initiate an alarm output. The detector shall signal the condition of alarm using a Normally Closed Reed Relay with terminal strip connections.

- 5 To accomplish PIR detection, the detector shall contain a sealed Pyro-Electric sensor peaked for the detection of near-infrared.
- 6 **Senor Stability**
- 6.1 The PIR detection shall use Quad Zone Logic Signal Processing. Quad Zone Logic provides multi segmented detection zones over the detection area. An alarm signal shall be created by the cumulated total IR energy of each zone. It is designed so that a human size target will normally fill 4 to 8 zones, and this shall cause an alarm to be generated. Any smaller temperature change (i.e. small to medium size pets, rodents or moving curtains) shall only activate one or two zones at the same time, creating a much weaker detection signal. Pet immunity shall apply to animals and/or rodents 0 to 16 inches in height.
- 6.2 These signals shall be further analysed by the "ECO" chip and signal processing circuit for accurate detection of humans and avoidance of most small animals. Temperature Compensation Logic shall be the primary functionality of the "ECO" chip. This temperature compensation circuit shall control sensitivity to improve stability against changes in environmental conditions.
- 6.3 To guard against false activations caused by RF interference, the detector shall incorporate RFI Protection capability. This circuitry shall adjust to background disturbances, in order to help reduce false activations while maintaining catch performance. No alarm shall occur at 20V/m from 100MHz to 1GHz.
- 6.4 To ensure proper circuit operation, the detector shall incorporate a PIR self-test with defaults. When the device is turned on, the warm-period shall be approximately 30 seconds.
- 6.5 The detector shall be rated to operate within the temperature range of minus 20° Celsius to plus 50° Celsius.
- 7 **Lens and Detection Pattern**
- 7.1 The detector shall be mounted between 1.5-2.4m high. The detector shall contain a front mounted spherical Fresnel lens that shall focus received infrared energy onto the sensor. The sensor shall construct a Wide Angle Protection coverage field of 12mx12m, at 85° wide, with 78 detection zones. When selecting the Long Range detection pattern, the pulse count selector shall be set to "2".

8. Maintenance

The system shall be mainly maintenance free allowing for easy replacement of parts at component level only.

Suppliers to provide costing for a quarterly maintenance of the intrusion alarm and fencing systems.

9. Redundant Communication Options

Provide redundancy in communications to ensure that the alarm sends a message to authorised Managers in case the communication network goes down.

Provide a frequency that makes the signal less likely to be jammed and the anti-RF-jamming software which will raise an alert if it becomes aware that the signals are not being delivered.

10. Environmental (Nuisance Alarms)

The system shall be set up to minimize both false and nuisance alarms by use of all the adjustments available.

10.1 Nuisance alarms are defined as those alarms generated by a properly functioning processor and attached sensor and the cause is known or suspected (animal, wind-blown debris, or other) and is not an intentional intrusion attempt.

10.2 The system shall operate as specified when installed properly to the Manufacturer's recommendations in indoor environments. The system shall be installed in such a manner as to minimize the nuisance alarm rate (NAR) due to the following possible causes:-

"PREVIEW COPY ONLY"

Vegetation up to 30 cm (1 ft.) high, Rain, Sunrise/sunset, Wind, Low flying aircraft, temperature changes (-30°C to +70°C cable only), Snow, Fog, Sandstorms, Acoustic, RFI or EMI effects, lightning strikes in the vicinity, pets

- 10.3** Alarms generated by internal electronic processes (cables excluded) shall not exceed one per sensing controller per month

11 Warranty

The product warranty shall be 24 months from date of purchase and an on-going warranty extension program shall be available for the life of the product.

Suppliers must provide a certified standard 3 year warranty per item supplied and it must be from the respective OEMs or equipment supplied.

12 National and International standards

Suppliers must ensure that the most recent version of these standards and specifications are obtained and adhered to, as well as any other relevant international and national standards and specifications:

- a. South African Bureau of Standards (SABS)
- b. ISO 9001 Quality Management Systems

13 Grant of licence

13.1 The Contractor hereby grants to the client, who hereby accepts, a perpetual, non-exclusive licence to use the Software for the System and (if applicable) the Client's own integrated security system.

13.2 The Client shall pay to the contractor the once off licence fees per system. No further licence fees shall be payable by the Client to the contractor for the use of the Software.

14 Pricing

The pricing offered shall be for the configuration and integration of the existing intrusion alarm and fencing systems to the Nerve Centre, hand-over and guarantee of the system as specified, complete in every respect.

All prices quoted shall be quoted in South African currency and shall be a fixed price.

15 Compliance to specification

The Contractor shall comply with all the requirements as per this specification. Proposed deviations shall only be considered after the awarding of the contract.
