5.1 **Commissioning tests:** The Contractor shall test all electrical protection equipment at all existing or newly built 11KV Distribution Supply, Traction Sub- and Tie Stations in which relevant equipment has been replaced on an emergency repair or newly installed basis as follows:

- i. **Current transformers:** Insulation test by 2.5 kV megger. Ratio (by primary injection at either rated current or a percentage thereof) and full magnetisation curve. Polarity tests where applicable.
- ii. **Protection relays:** Current Injection tests on all phases and to earth at all percentages i.e. at 125, 200, 400 and 600% of set value for distribution equipment and at 200 and 400% for traction equipment of secondary rated current noting tripping times and indications as indicated on relevant test sheets. Restricted Earth Fault and Duo Biased protection must be tested by the applicable voltage/current required. Where Distribution Ring-feed systems are protected by Pilot Wire protection the SOLKOR /TRANSLAY relays must be tested by secondary injection to trip at the percentage values in the local and remote substations with a stability test by primary injection on one phase to earth or to a second phase, noting the milliamp current flow in the pilot wires.
- iii. **AC, DC Earth and Frame Leakage systems:** Insulation values to earth and between separate systems/zones by suitable earth and insulation megger. Tripping current values by Primary injection for relevant zone/systems to be noted to give required tripping, indications and lockout. Systems shall be tested for possible parallel paths as well.
- iv. **Transformer protection:** Buchholtz relays to be tested by air injection/test trip noting trip level to give lockout and indication. Oil and Winding Temperature Gauges to be tested by dial indication to give trip, indication and lockout as applicable. Where required a calibration test is to be done by heat simulation. - xi. **Primary Circuit Breaker/Primary disconnects replacement:** To be tested strictly according to relevant commissioning sheet.

Routine tests: The Contractor shall test all electrical protection equipment at all existing Signal and Distribution Supply, Traction Sub- and Tie Stations as follows:

- xii. **Current transformers:** Magnetisation curve to be tested at a minimum of two points at knee point voltage as depicted on previous routine or commissioning test reports. If not according to commissioning values a full magnetisation curve must be done. If not within tolerances a ratio test must be performed to prove the integrity of the current transformer. Current transformers: Insulation test by 2.5 kV megger. Ratio (by primary injection at either rated current or a percentage thereof) and full magnetisation curve. Polarity tests where applicable.
- xiii. **Protection relays:** Current Injection Tests at 200 and 600/800 percent indicated on relevant test sheets of secondary rated current noting tripping times and indications. Where Distribution Ring-feed systems are protected by Pilot Wire protection the SOLKOR /TRANSLAY relays must be tested by secondary injection to trip at the percentage values in the local and remote substations with a stability test by primary injection on one phase to earth or to a second phase, noting the milliamp current flow in the pilot wires.
- xiv. **AC / DC Earth and Frame Leakage systems:** Insulation values to earth and between separate systems/zones by suitable earth and insulation meggers. Tripping current values by Primary injection for relevant zone/systems to be noted to give required tripping, indications and lockout. Systems shall be tested for possible parallel paths as well.
